# BURNSi

## Objective:

1. To announce BURNSi
2. To present the scope and Methodology
3. Show related measurement results

CSSM Conference  
Kiel, 25 September 2019

Hans Hasenpflug  
DMO

# Content

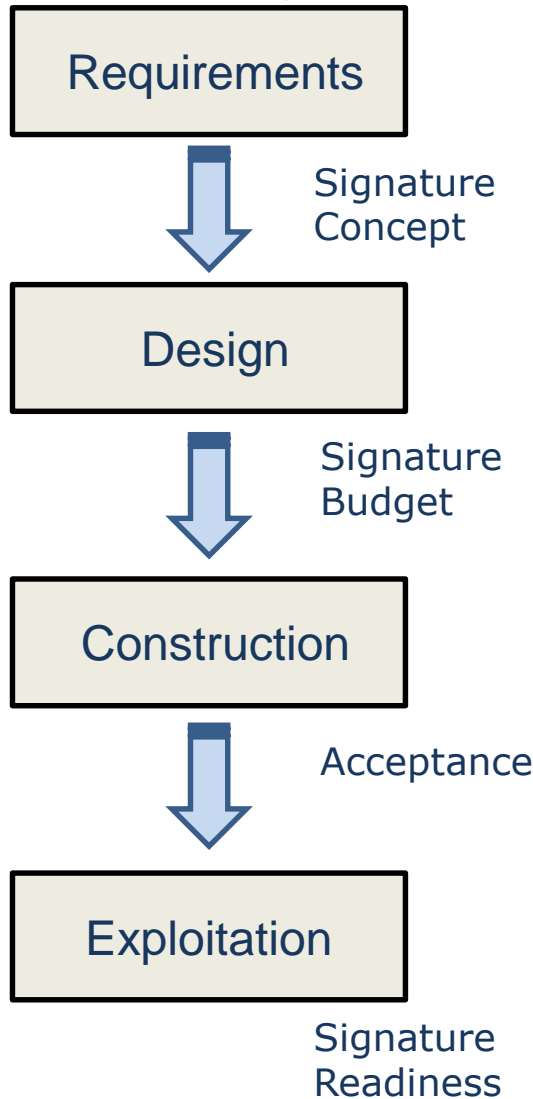

- Introduction
- Objective
- Underwater Radiated Noise
- Methodology
- Orca
- Workshop

# Introduction

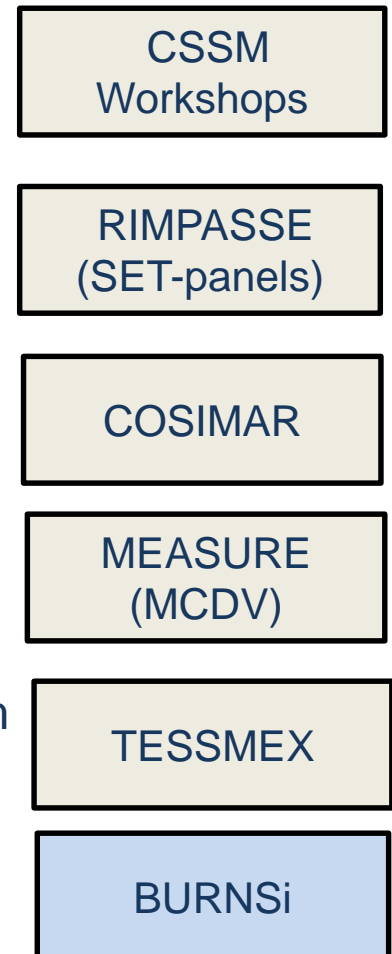

## Technology:

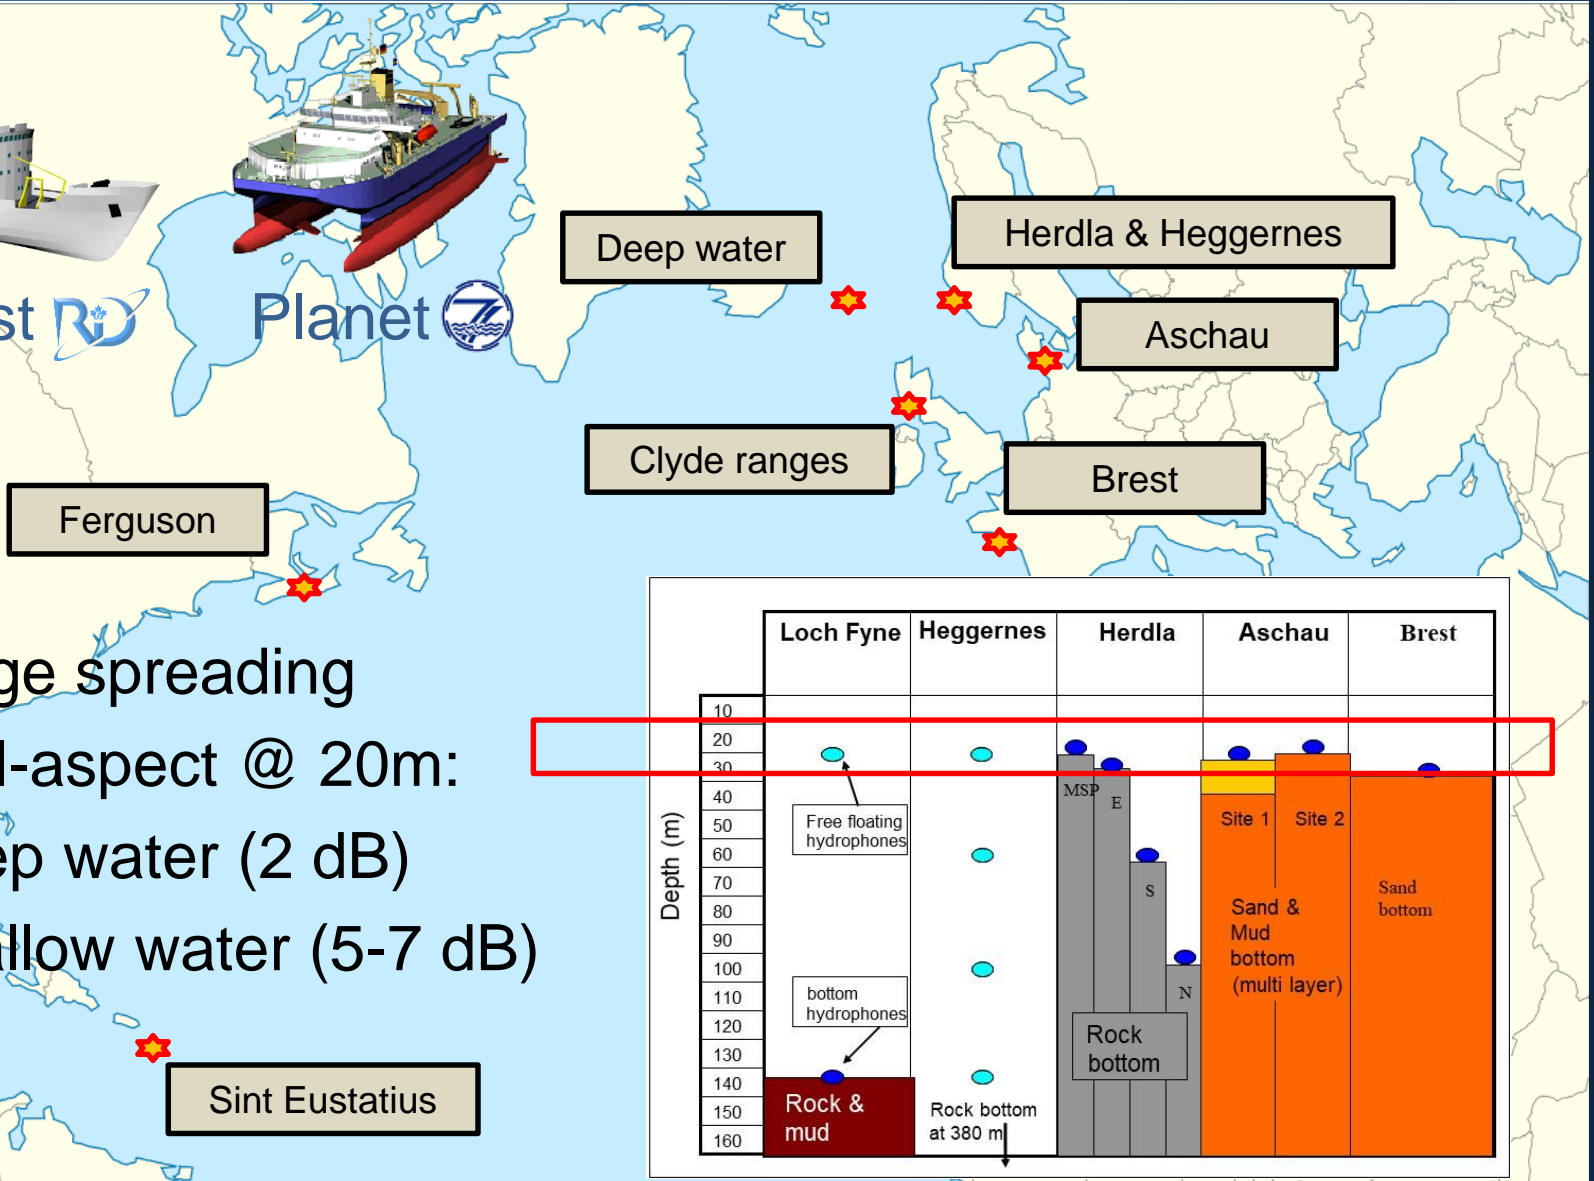

## Tools:

- Standards
- Mathematical models
- Reduction measures
- Measurement facilities
- Database (Historical data)
- Signature Management System

## International cooperation:

# Introduction

Average spreading

In keel-aspect @ 20m:

- Deep water (2 dB)
- Shallow water (5-7 dB)

- Introduction
- **Objective**
- Underwater Radiated Noise
- Methodology
- Orca
- Workshop

# Objective

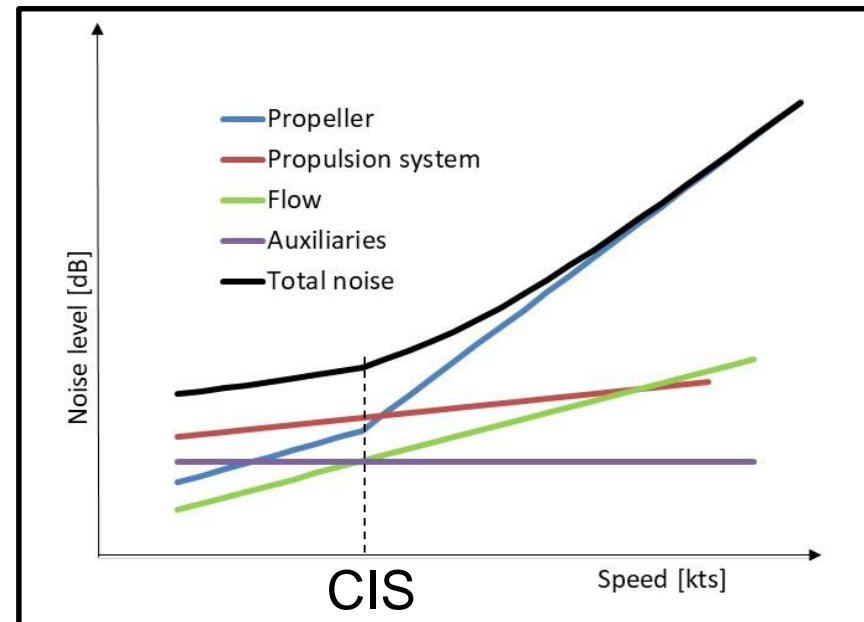

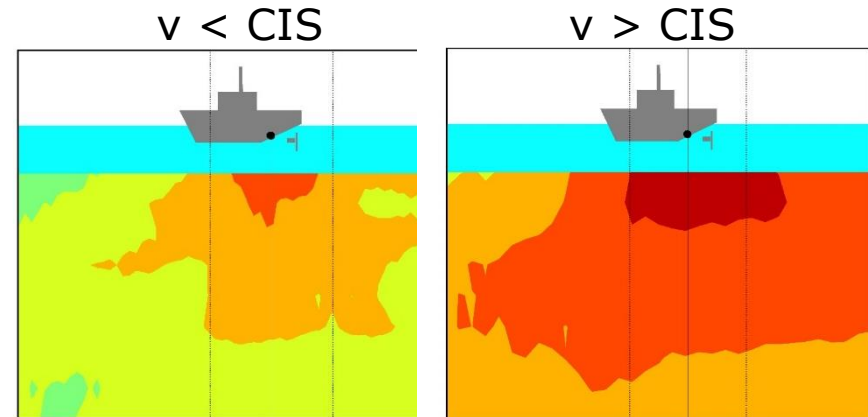

The long-term goal of the BURNSi workshops is the validation and improvement of national prediction models for the analysis and realistic calculation of **underwater radiated noise** levels of naval platforms and the effect of noise control measures.

In analogy with the Benchmark Target Strength Simulation (BETSSi) workshops, organized by WTD71(FWG) in cooperation with DRDC and TNO.

# Underwater Radiated Noise

Noise sources:

# Underwater Radiated Noise

## Machinery sources:

### Propulsion system

- Motor
- Gearbox

### Auxiliaries

- DG-sets
- Pumps

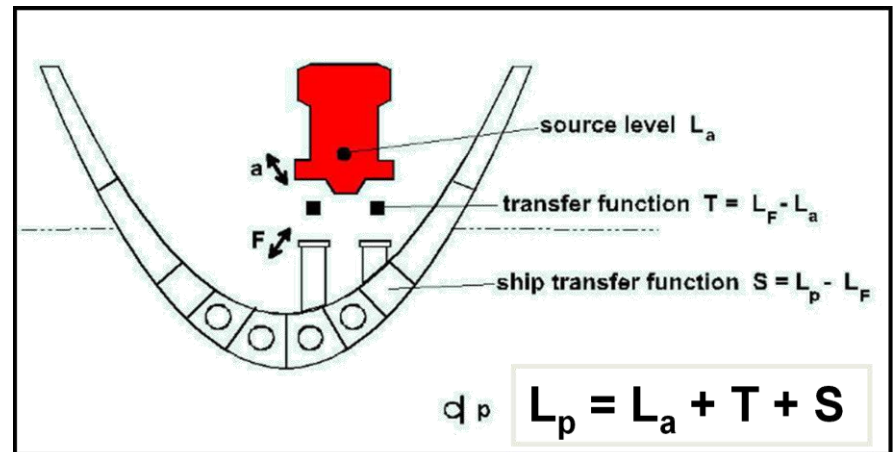

BURNSi

Structure-borne

Air-borne

Fluid-borne

# Underwater Radiated Noise

## Hydrodynamic sources:

### Propeller

Cavitation noise  
( $v > C_{IS}$ )

- Tip vortex cavitation
- Sheet cavitation
- Bubble cavitation

Propeller noise  
( $v < C_{IS}$ )

- Inflow turbulence
- Trailing edge noise
- Tip noise
- Noise banding

### Flow

Flow induced noise

- TBL excitation
- Structural re-radiation

Flow noise

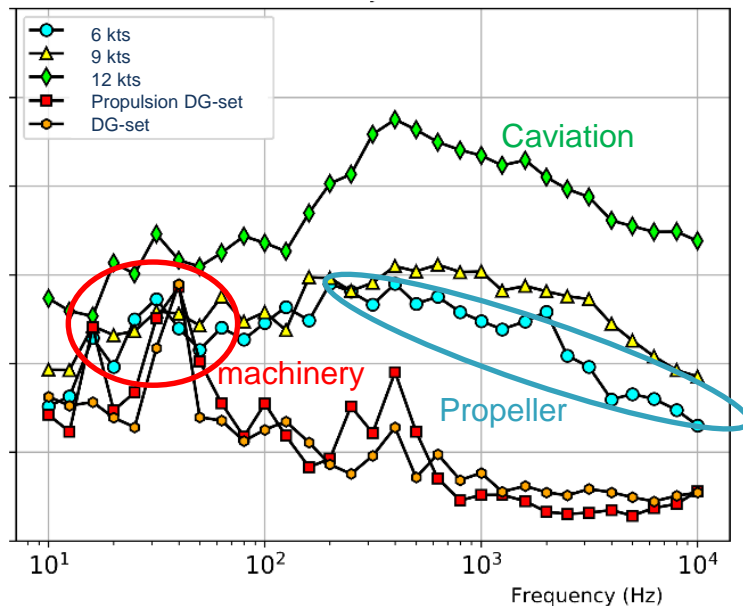

- Turbulence direct rad.
- Bubbles

# Underwater Radiated Noise

## RIMPASSE:

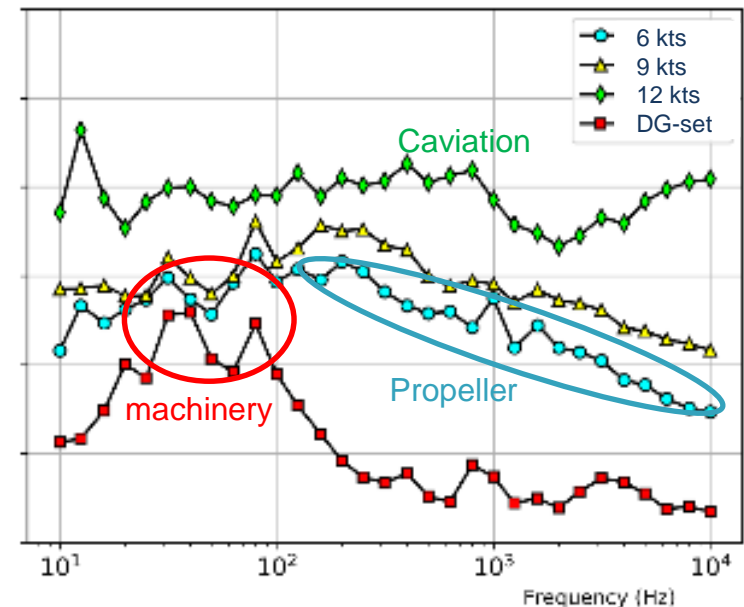

### Planet

- Swath (3850 ton)
- PM propulsion
- DG set double mounted and enclosed located above waterline

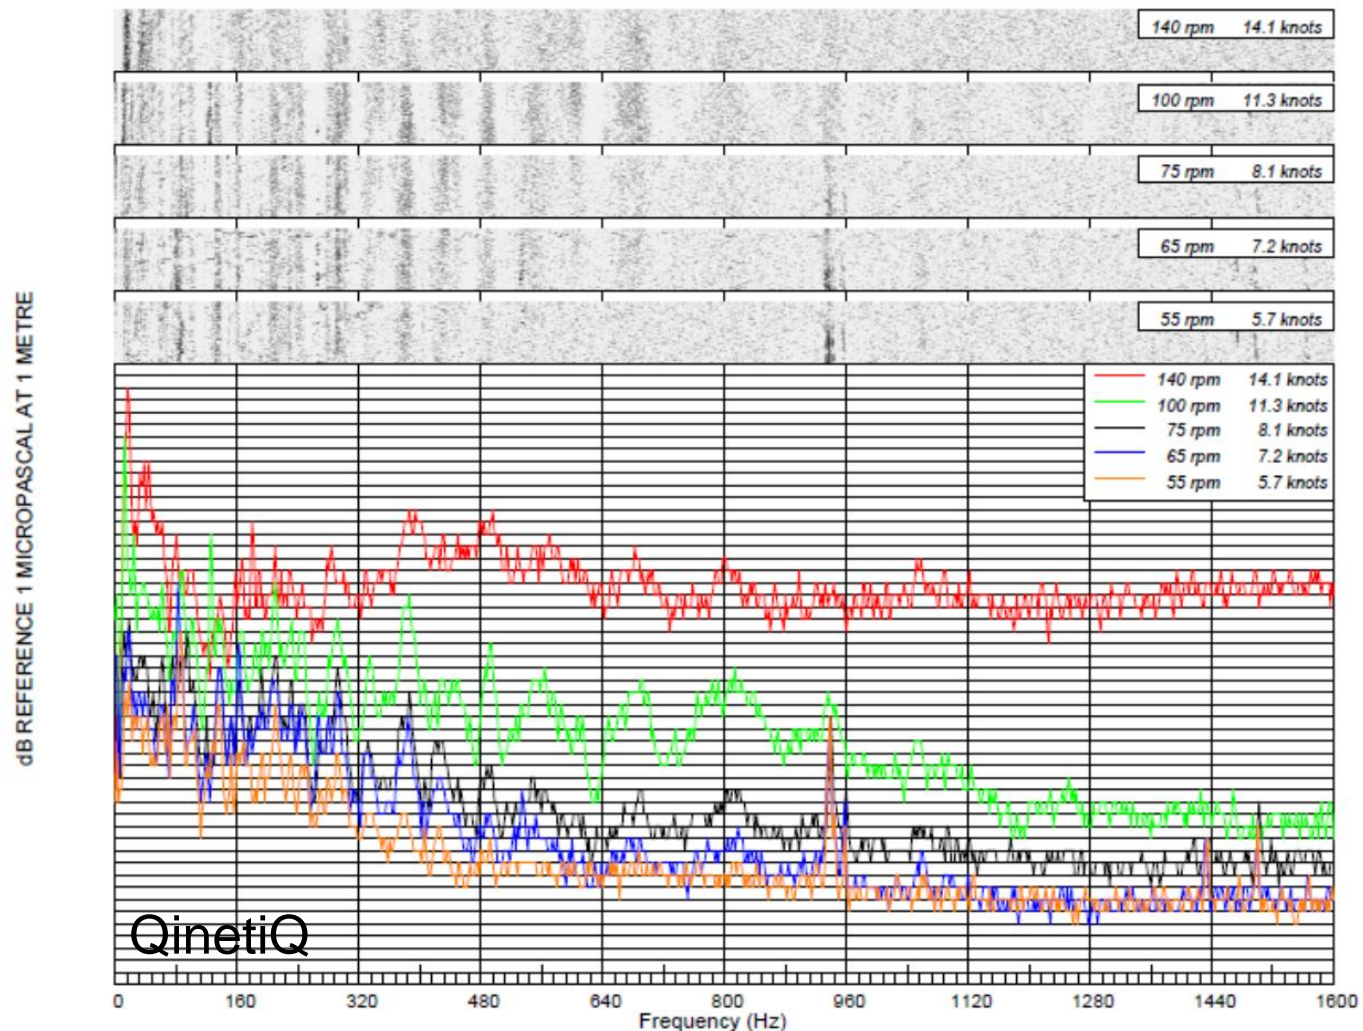

### Quest

- Monohull (2200 ton)
- DC propulsion
- Damping tiles
- DG sets on common enclosed raft

# Underwater Radiated Noise

## Propeller noise:

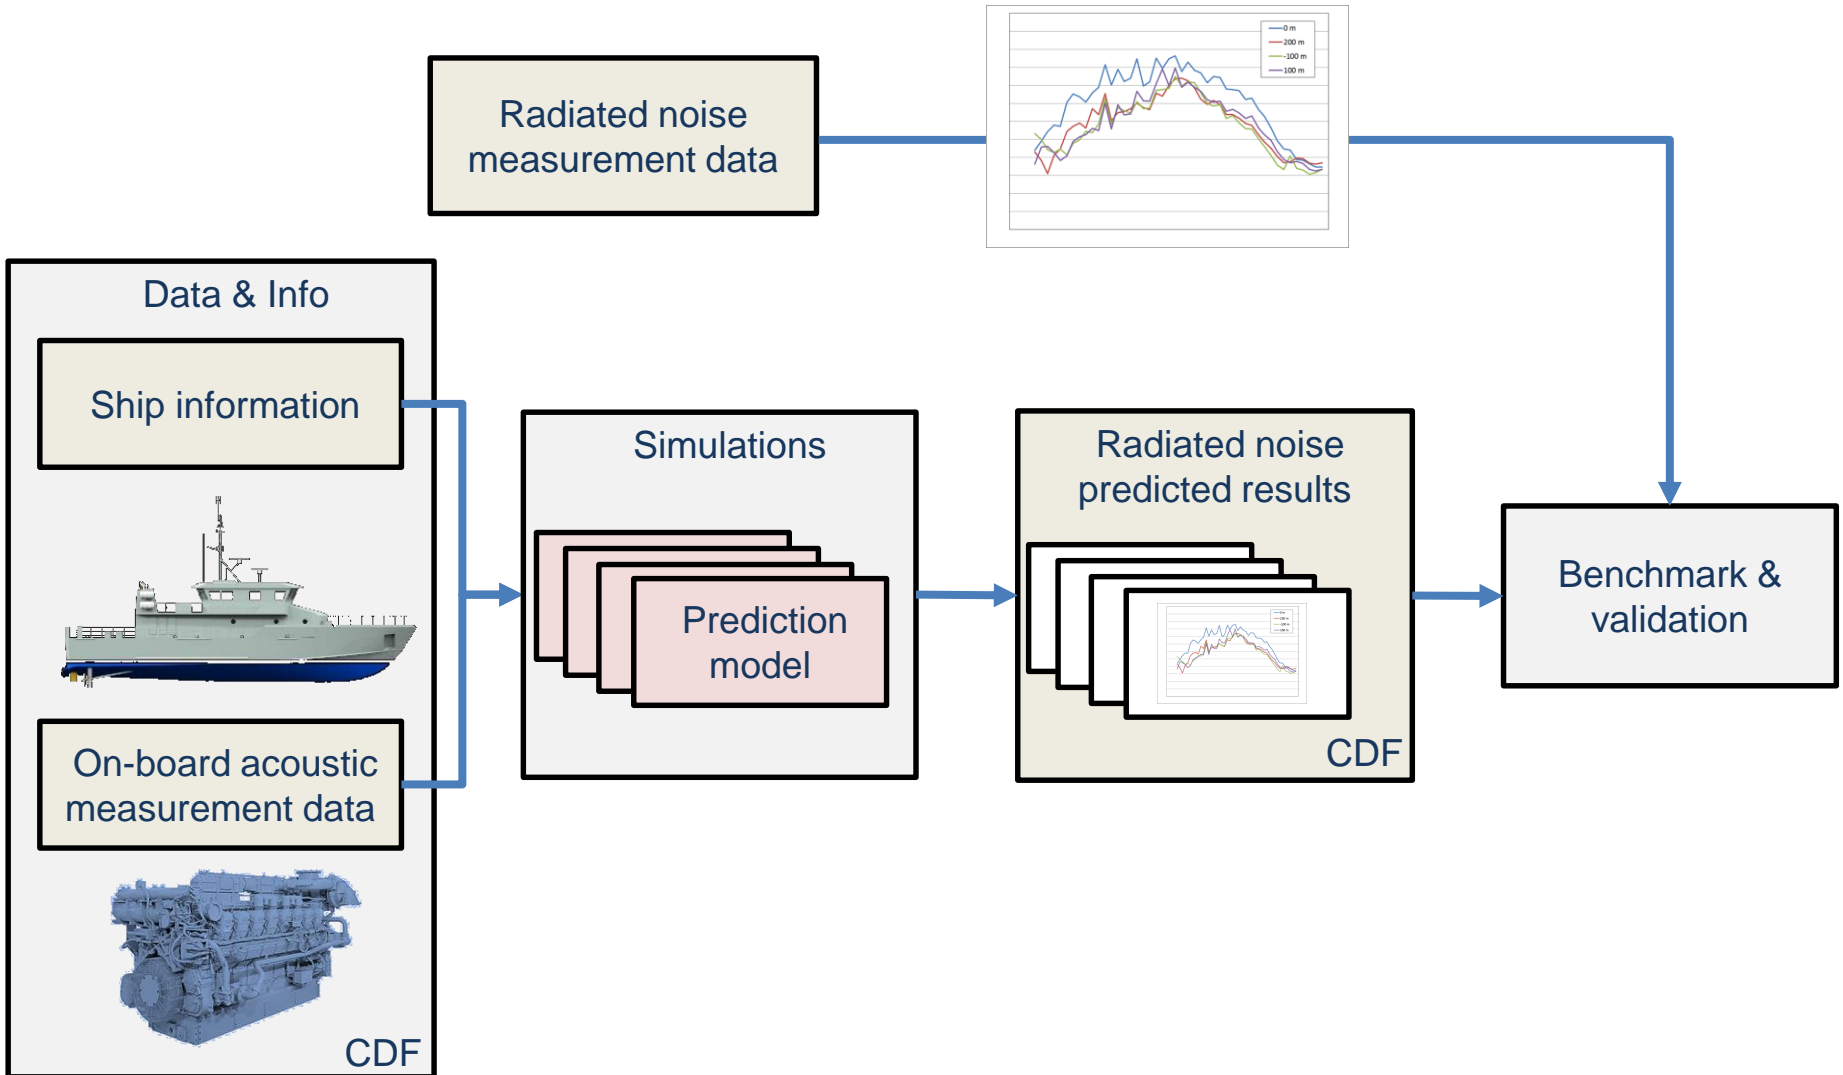

# Methodology

UNCLASSIFIED

12

# Orca class

## Main Characteristics:

Displacement	210 Tonnes
Length	33 m
Breath	8.3 m
Keel depth	2 m
Hull material	Steel
Propulsion	2 x 1864 KW
Maximum Speed	18 kts

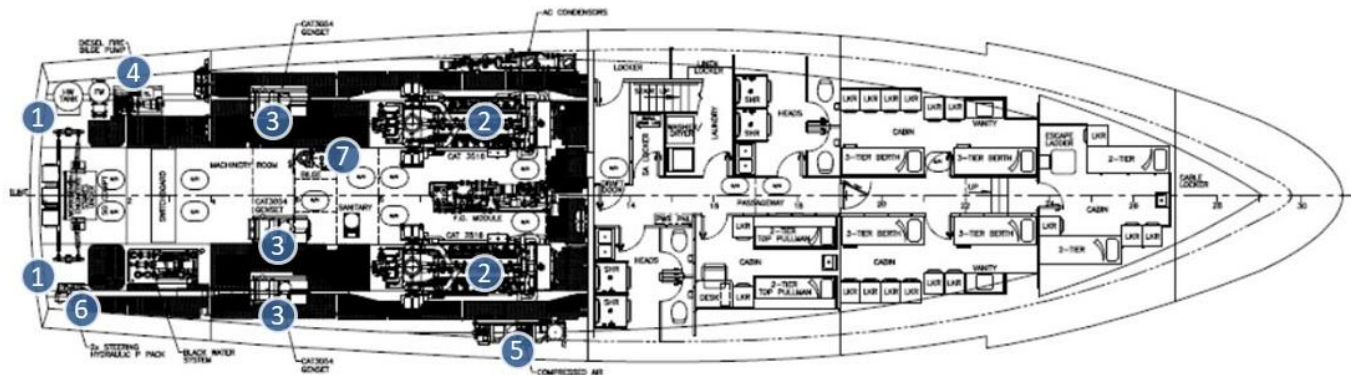

# Orca class

## Machinery:

1	Propellers (5 bladed fix pitch)	2x
2	Propulsion Diesel engines (CAT3516)	2x
3	Diesel Generator sets (CAT3054T)	3x
4	Diesel Fire Bilge Pump	1x
5	Air Compressor unit	1x
6	Steering Hydraulic Power Pack	2x
7	Bilge pump	1x

# Workshop

## Tasks:

1. Global assessment of overall radiated underwater noise levels of ORCA taking in account all machinery and hydrodynamic noise sources for different specified operational conditions.
2. Detailed prediction of the radiated underwater noise levels of Diesel Generator sets.
3. Detailed prediction of the radiated underwater noise levels of propulsion diesel engines for different speeds.

# Workshop

## Provided information & data:

1. Structure borne noise levels mounting and flanking path
2. Airborne noise levels
3. Dynamic stiffness of flexible elements
4. Drawings
  - Machinery room layout
  - Ship hull and machinery foundations
5. *Mechanical impedance ship foundations*

Diesel engine  
(CAT3516)

DG-sets  
(CAT3054T)

# Workshop

## Results:

1. Each participating organization shall provide results for all specified test cases and all parameter settings as far as their modelling capabilities allow.
2. Results shall be delivered to the workshop organizers prior to the workshop according to a specified format.
3. All gathered results shall be distributed/shared among all participants of the workshop for use within their organization.

# Workshop

## Schedule:

Announcement:	December 2019
Possible participants:	Defense Material Organizations, Ship Yards, R&D institutes, .....
Specification:	February 2020
Workshop:	September 2020
Location:	The Netherlands
